

EDUCATION	
GPA: 3.82	
San José State University	
B.S. Computer Science	
Expected June 2028	
Foothill College	Computer Science Transfer Program
2024—2026	
TECHNICAL SKILLS	
Security & systems	Wazuh, Windows EventChannel, Linux, PowerShell, VirtualBox, DNS, DHCP, IPv4/IPv6, Git
Languages & backend	Python, Java, TypeScript and JavaScript, C++, Node.js, GraphQL, SQLite
Testing & web	Playwright, Selenium, React, Next.js, FFmpeg
EXPERIENCE	
Virtius	- Fixed score-precision, ranking, and exhibition-athlete edge cases in a production NCAA gymnastics application, improving the consistency of live results. - Restructured GraphQL requests, caching, and client/server rendering paths; added Playwright regression coverage for scoring workflows.
Software Engineering Intern	
December 2025—June 2026	
HeartBeam	- Designed and configured an Airtable CRM for client and sales-pipeline workflows, translating business requirements into structured records, views, and repeatable processes. - Partnered with business users to explain the new system, refine workflows, and configure access and safeguards for reliable day-to-day use.
Technical Intern	
April 2025—May 2026	
Almaden Valley Athletic Club	- Built a Python and Selenium desktop application for recurring enrollment, waitlist, and attendance workflows using pasted rosters and CSV, TXT, or PDF imports. - Separated business rules from browser actions and stopped automation on ambiguous matches, capacity limits, outdated sessions, and attendance exceptions.
Receptionist	
June 2024—Present	
PROJECTS & LABS	
Wazuh SIEM Lab	Deployed a Wazuh manager and Windows agent, generated controlled account activity, and reconstructed related alerts by host, sequence, rule, and severity.
Wazuh, Windows EventChannel, VirtualBox	
Pi-hole DNS Investigation	Isolated a filtering failure to gateway-controlled DNS/DHCP and an IPv6 resolver path, recovered the lab, and recommended explicit control-plane ownership.
Raspberry Pi, DNS, DHCP, IPv4/IPv6	
ClosetCast	Built and operate a Windows kiosk coordinating five RTSP feeds, calendar, and weather with isolated failures, automatic reconnection, cached fallbacks, and private configuration.
Electron, Node.js, FFmpeg, PowerShell	
Python File Analyzer	Built a CLI that hashes files, reports size and type, handles inaccessible inputs, and emits reviewable terminal and structured JSON results.
Python, SHA-256, JSON	
Neural Network from Scratch	Implemented and unit-tested configurable feed-forward networks, backpropagation, adjustable hidden layers, data splitting, weight updates, and error calculation.
Python, NumPy	
Secure Static Portfolio	Built a no-JavaScript portfolio with a restrictive Content Security Policy, no tracking or forms, documented hosting boundaries, and automated privacy/link validation.
HTML, CSS, CSP, GitHub Pages
